Data Dictionary

Column Name	Data Type	Grain Level	Source	Description	Calculations & Assumptions
Force	String	Macro	UK Police Crime Data	The standardised name of the police force	Dynamically extracted and cleaned by removing “Police”, trimming trailing spaces, and converting to capital casing.
Year	Int	Macro	UK Police Crime Data	The specific calendar year of the recorded metrics	Extracted directly from the folder name and converted into a Pandas datetime attribute. Assumed that the year to which the data is in is the year of the data.
LSOA name	String	Micro	UK Police Crime Data	The name of the LSOA neighbourhood	Missing data handled by replacing with a placeholder: “No LSOA Name assigned”.
Crime type	String	Micro	UK Police Crime Data	The category of the crime	Normalised by stripping of trailing whitespace and converting to capital casing. Assumed that the crime types are all clean and unique.
Crime count	Int	Micro	Derived (UK Police Crime Data)	The total number of crimes of the specific crime type within the LSOA and year	Calculated by counting the number of records within each specific Force X Year X LSOA X Crime Type group, utilising the Crime ID as the baseline counter. Rows containing missing Crime ID values (Hold “No Crime ID as a place holder), are still treated as valid and unique crimes.
Latitude	Float	Micro	UK Police Crime Data	Geographic coordinate representing the north-south position of a record crime incident	Missing data is handled by replacing it with the placeholder value 0. Assumed that crimes with missing latitude values had withheld GPS data.
Longitude	Float	Micro	UK Police Crime Data	Geographic coordinate representing the	Missing data is handled by replacing it with the

				east-west position of a record crime incident	placeholder value 0. Assumed that crimes with missing longitude values had withheld GPS data.
Total Force Crime Count	Int	Macro	Derived (UK Police Crime Data)	Total number of crimes of a force committed in a given year	Calculated by grouping all records by Force and Year, then counting the total number of rows
Population	Int	Macro	ONS Population Estimate Data	Total population for the specific police force area	Calculated by adding together all the individual age and gender columns from left to right of a force for a given year
Force Crimes per 1000	Float	Macro	Derived Baseline	Standardised annual per-capita crime rate	Calculated with the formula: (Total Annual Force Crime Count / Annual Force Population Estimate) x 1000
AvgIMDScore	Float	Macro	Index of Deprivation 2025	Average Index of Multiple Deprivation Score across all neighbourhoods overseen by the force	Calculated by taking all the individual neighbourhood deprivation scores within a police force's area and averaging them
AvgIncomeDecile	Float	Macro	Index of Deprivation 2025	Average neighbourhood national income decile rating for the specified force	Calculated by averaging the national household income rankings for all the neighbourhoods inside a police force's area
NeigbourhoodCount	Int	Macro	Index of Deprivation 2025	Total number of distinct LDOAs managed under a force	Calculated by counting up how many neighbourhoods are within a force
HighlyDeprivedCount	Int	Macro	Derived (Index of Deprivation 2025)	Number of neighbourhoods in the top 10% most deprived in the UK	Calculated by counting up how many neighbourhoods within a police force's area are flagged as being in the top 10% most deprived areas in the country.
HighlyDeprivedPercentage	Float	Macro	Derived Baseline	Percentage of neighbourhoods in the top 10% most deprived in the UK	Calculated by using the HighlyDeprivedCount, dividing by the total number of neighbourhoods covered by the force and multiplying by 100
